## Definitions & Abbreviations Used in This Chart

**Maximum Contaminant Level Goal—MCLG** - The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLG's allow for a margin of safety.

**Maximum Contaminant Level—MCL** - The highest level of a contaminant that is allowed in drinking water. MCL's are set as close to the MCLG's as feasible using the best available treatment technology.

**Action Level** - The concentration of a contaminant, which if exceeded, triggers treatment or other requirement, which a water system must follow.

ppm - parts per million  
 ppb - parts per billion  
 N.D.- Not Detected  
 A.L.- Action Level  
 N.R.- Not Required  
 MCLG - Maximum Contaminant Level Goal  
 MCL - Maximum Contaminant Level  
 mg/L—milligrams/liter
